Computer Engineer with five years building software that runs in production: bank origination at thousands of operations a day, complete management systems, and migrations of legacy financial applications. React and TypeScript on the front end, with real work in the database, in security and in deployment. Every project in my portfolio ships a working demo of the hardest part.

EXPERIENCE

Grupo Salinas · Banco Azteca — Software Engineer

Nov 2024 — present · Mexico City

- Built critical transactional origination flows — account opening, investments, insurance, portability — in React and Redux, on a product handling thousands of operations a day.
- Cut load and sign-up times by 30%, raising the completion rate on new applications.
- Retries that resume a flow at the point of failure instead of restarting it: at this volume, a 1-in-1000 error lands dozens of times a day.
- Integrated REST APIs and microservices for real-time financial transactions, normalising responses at the boundary and following OWASP practices.
- Shipped new modules into the origination core — identity validation, anti-money-laundering checks, paperless signing with OTP, card delivery — coordinating changes across versioned libraries shared between teams.
- Brought the Jest suite back from ~200 to 272 passing suites by fixing systemic issues in configuration and navigation context. Raised coverage from 40% to 88%, with zero bugs, zero code smells and 2% duplication in SonarQube.

Smart Quality Software — Front-End Software Engineer

Mar 2024 — Nov 2024 · Mexico City

- Technical lead for the front end of Conciliagas, a volumetric reconciliation platform: launched in under six months and running across more than 150 stations.
- High-performance interfaces for processing and visualising volumetric data.
- Unit tests in Jest and reusable components documented in Storybook.

Denumeris Interactive Agency — Information Technology Specialist

Jul 2021 — Mar 2024 · Mexico City

Riot Games — Information Technology Support

Jan 2021 — Mar 2022 · Mexico City

PROJECTS IN PRODUCTION

Gladiadores Playa · gladiadoresplaya.com.mx

Gym management system in production, sole developer: 14 modules, QR door access with anti-passback, transactional point of sale and multi-location support. React 19, TypeScript, PostgreSQL with Row Level Security.

Sandate Consultores · sandateconsultores.com.mx

Client portal with security enforced at the database level: RLS, functions running with elevated rights, and signed URLs for sensitive documents. Realtime notifications and alerts over the WhatsApp Cloud API.

Cresagas

Migrated a 10,850-line WPF desktop application to the web without moving the production database. Financial logic isolated behind 46 tests, including the difference between banker's rounding in C# and half-up in JavaScript. Next.js, Prisma, SQL Server.

STACK

Languages and frameworks TypeScript, JavaScript (ES6+), React 19, Next.js, Angular 13+ (RxJS, NgRx), Node.js

State and data Redux, TanStack Query, Zustand, REST APIs, GraphQL, PostgreSQL with Row Level Security, Prisma, Supabase, SQL Server

Interface and testing Tailwind CSS, Material UI, Chakra UI, Styled Components, Jest, Cypress, React Testing Library, Storybook, Puppeteer

Tooling Git, GitHub Actions, Docker, Vercel, Jira, agile methodologies

EDUCATION AND CREDENTIALS

B.Eng. in Computer Engineering — FES Aragón, UNAM

2014 — 2018

Claude Code 101 — course completion badge — Claude Academy (Anthropic)

2026

Three web development courses — Udemy

2023

LANGUAGES

Spanish native. English at a technical level: I read, write and work in it; intermediate conversation.
